Memo

To: Honorable Board of Directors
From: Roy Frausto, General Manager
Meeting Date: June 14, 2021
Subject: 2020 Consumer Confidence Report

Summary

In 1996, Congress amended the Safe Drinking Water Act by requiring water systems to deliver an annual water quality report in the form of a consumer confidence report (CCR) to all its customers, similarly to the Annual Water Quality Report (AWQR) that California water systems began distributing in 1990. However, the CCR calls for specific and detailed regulatory requirements in terms of content and format as opposed to those for the AWQR. The CCR includes information on source water, levels of any detected contaminants, and compliance with drinking water regulations along with brief educational material. Every community water system must prepare, distribute, and ensure that its customers receive a report containing all required content. The reports are based on calendar-year data and must be delivered to consumers annually by July 1st of the following year.

In 2013, the US EPA and the State Water Resources Control Board Division of Drinking Water (DDW) began allowing community water systems to distribute the CCR electronically. DDW provides guidance on the delivery methods to ensure all consumers of a community water system have access to the CCR. One method to ensure all consumers have access is to mail each customer a notification that the CCR is available and include in the notice the direct website link (URL) to the CCR on a publicly available site on the internet where it can be viewed.

Enclosed is the final draft of the District's 2020 CCR. Prior to the end of June, District staff will mail out postcard notices informing consumers that the CCR is available online. As expected, the drinking water provided in 2020 by the District met all Federal and State drinking water standards. Any customer wishing to receive a hard copy of the CCR will be mailed one upon request. In addition, a Spanish translated CCR will be posted online and hard copies will also be made available upon request.

Respectfully Submitted,

A handwritten signature in blue ink, appearing to read "Roy Frausto", is written over a light blue circular scribble.

General Manager

2020

CONSUMER CONFIDENCE REPORT

COMMITTED TO WATER QUALITY: ABOUT THE CCR

La Puente Valley County Water District is committed to keeping our customers informed about the quality of the safe, reliable drinking water we provide to your homes 24/7 and meets or exceeds all state and federal standards.

Our 2020 Consumer Confidence Report (CCR) is an annual drinking water quality report that the Safe Drinking Water Act requires public water systems to provide to its customers and includes important information on where our water comes from and the quality of your water.

For information or questions regarding this report, please contact **Roy Frausto, (626) 336-1307**.

Este informe contiene información muy importante sobre su agua de beber. Tradúzcalo ó hable con alguien que lo entienda bien. Para más información o preguntas con respecto a este informe, póngase en contacto con el **Sr. Roy Frausto, (626) 336-1307**.

此報告包含有關您的飲用水的重要信息。可以翻譯此報告或與了解它的人交談。

这报告包含有关您的饮用水的重要信息。可以翻译此报告或与了解它的人交谈。

OUR GROUNDWATER SUPPLY

LA PUENTE VALLEY COUNTY WATER DISTRICT (LPVCWD) relies on local groundwater for our water supply. The groundwater supply primarily comes from the District's Wells 2, 3, and 5 located in the Main San Gabriel Basin along with a small portion of water supplied to our customers from Industry Public Utilities, who in turn receive water from San Gabriel Valley Water Company. A top priority for our District is ensuring this groundwater is safely treated to meet some of the highest water quality standards in the world.

Water delivered to the District's customers undergoes a significant treatment process. The treatment systems are designed to treat specific types of contaminants. This entire process is monitored closely and the water is sampled regularly to verify the treatment systems are effective.

HOW WE TREAT YOUR WATER

1. Air Stripping Towers remove VOCs to below detection levels.
2. A single pass ion exchange system uses resin specifically manufactured to remove perchlorate.
3. A hydrogen peroxide injection system injects hydrogen peroxide in preparation for the UV reactors.
4. UV reactors treat for NDMA and 1, 4-Dioxane.
5. Water exiting the facility is chlorinated to provide a disinfectant residual in the water system.
6. Treated water then enters the water system and is delivered to your home.

DRINKING WATER SOURCE ASSESSMENT

In accordance with the Federal Safe Drinking Water Act, an assessment of the drinking water sources for LPVCWD was completed in March 2008. The goal of this assessment was to identify types of activities in the proximity of our drinking water sources that could pose a threat to the water quality. The assessment concluded LPVCWD's water sources are most vulnerable to contaminants from the following activities or facilities, including leaking underground storage tanks (known as contaminant plumes), high-density housing and transportation corridors, including freeways and state highways.

An assessment of the drinking water sources for the San Gabriel Valley Water Company (SGVWC) was updated in October 2008. The assessment concluded SGVWC's water sources are most vulnerable to contaminants from the following activities or facilities, including leaking underground storage tanks (known as contaminant plumes); hardware/lumber/parts stores; hospitals; gasoline stations; above ground storage tanks; spreading basins; storm drain discharge points; and transportation corridors, such as freeways and state highways.

REQUEST A SUMMARY OF THE LPVCWD OR SGVW ASSESSMENT BY CONTACTING ROY FRAUSTO AT 626-336-1307.

PRECAUTIONS FOR IMMUNO-COMPROMISED PEOPLE

Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised people, such as those with cancer taking chemotherapy, people who have undergone organ transplants, those with HIV/AIDS or other immune system disorders, the elderly and infants, can be particularly at risk from infections. Immuno-compromised people should seek advice about drinking water from their health care providers.

US-EPA/Centers for Disease Control (CDC) guidelines on appropriate means to lessen the risk of infection by Cryptosporidium and other microbial contaminants are available from the Safe Drinking Water Hotline: 1-800-426-4791.

ABOUT YOUR DRINKING WATER: SAMPLING RESULTS

Your drinking water is tested thousands of times per year to ensure it meets or exceeds all state and federal drinking water standards. Our water is tested by certified professionals and laboratories to ensure the highest levels of safety.

Important information about the tables in this report:

- Tables show the average and range of concentrations of the constituents tested during the 2020 calendar year.
- The state allows us to monitor for some contaminants less than once per year because the concentrations of these contaminants do not change frequently.
- Unless otherwise noted, the data in this table are from the testing performed from Jan. 1 to Dec. 31, 2020.
- The table lists all the contaminants detected in your drinking water that have federal and state drinking water standards.
- Detected unregulated contaminants of interest are also included.

INFORMATION ABOUT DRINKING WATER CONTAMINANTS

Drinking water sources (both tap water and bottled water) include rivers, lakes, streams, ponds, reservoirs, springs and wells. As the water travels over the surface of the land or through the ground, the water dissolves naturally occurring minerals – sometimes including radioactive material – and can also pick up substances resulting from the presence of animals and human activity.

Drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the **USEPA's Safe Drinking Water Hotline, 1-800-426-4791**.

Natural contaminants present in source water prior to treatment may include:

Microbial contaminants: Such as viruses and bacteria, that may come from sewage treatment plants, septic systems, agricultural livestock operations and wildlife.

Inorganic contaminants: Such as salts and metals, that can be naturally occurring or result from urban stormwater runoff, industrial or domestic wastewater discharges, oil and gas production, mining, or farming.

Pesticides and herbicides: That may come from a variety of sources such as agriculture, urban stormwater runoff and residential uses.

Organic chemical contaminants: Including synthetic and volatile organic chemicals, which are by-products of industrial processes and petroleum production, and can also come from gasoline stations, urban stormwater runoff, agricultural application, and septic systems.

Radioactive contaminants: Can be naturally occurring or be the result of oil and gas production and mining activities.

CONTAMINANTS IN DRINKING WATER

NITRATE ADVISORY

At times, nitrate in your tap water may have exceeded half the MCL, but it was never greater than the MCL. The following advisory is issued because in 2020, the District recorded a nitrate measurement in its treated drinking water above half the nitrate MCL. Nitrate in drinking water at levels above 10 milligrams per liter (mg/L) is a health risk for infants of less than six months of age. Such nitrate levels in drinking water can interfere with the capacity of the infant's blood to carry oxygen, resulting in a serious illness; symptoms include shortness of breath and blueness of the skin. Nitrate levels above 10 mg/L may also affect the ability of the blood to carry oxygen in other individuals, such as pregnant women and those with certain specific enzyme deficiencies. If you are caring for an infant, or you are pregnant, you should ask advice from your health care provider.

LEAD AND DRINKING WATER

Regulations require local water agencies to test for lead at all K-12 schools constructed before 2010. K-12 schools (total of 2) within the boundaries of the LPVCWD water system were sampled and tested for lead in 2018. If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing.

LPVCWD is responsible for providing high-quality drinking water, but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the **Safe Drinking Water Hotline, 1-800-426-4791, or epa.gov/lead**.

WATER QUALITY STANDARDS, DEFINITIONS, ACRONYMS AND ABBREVIATIONS

The chart in this report shows the following types of water quality standards:

MAXIMUM CONTAMINANT LEVEL (MCL): The highest level of a contaminant that is allowed in drinking water. Primary MCLs are set as close to the PHGs (or MCLGs) as is economically and technologically feasible. Secondary MCLs are set to protect the odor, taste, and appearance of drinking water.

MAXIMUM RESIDUAL DISINFECTANT LEVEL (MRDL): The highest level of a disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary for control of microbial contaminants.

PRIMARY DRINKING WATER STANDARD (PDWS): MCLs, MRDLs and treatment techniques (TTs) for contaminants that affect health, along with their monitoring and reporting requirements.

REGULATORY ACTION LEVEL (AL): The concentration of a contaminant, which, if exceeded, triggers treatment or other requirements that a water system must follow.

NOTIFICATION LEVEL (NL): NLs are health-based advisory levels established by the State Board for chemicals in drinking water that lack MCLs. When chemicals are found at concentrations greater than their NL, certain requirements and recommendations apply.

The chart in this report includes three types of water quality goals:

MAXIMUM CONTAMINANT LEVEL GOAL (MCLG): The level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs are set by the USEPA.

MAXIMUM RESIDUAL DISINFECTANT LEVEL GOAL (MRDLG): The level of a drinking water disinfectant below which there is no known or expected risk to health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.

PUBLIC HEALTH GOAL (PHG): The level of a contaminant in drinking water below which there is no known or expected risk to health. PHGs are set by the California Environmental Protection Agency.

TREATMENT TECHNIQUE (TT): A required process intended to reduce the level of a contaminant in drinking water.

LA PUENTE VALLEY COUNTY WATER DISTRICT · YEAR 2020 WATER QUALITY TABLE

CONSTITUENTS AND (UNITS)	MCL	PHG or (MCLG)	DLR	TREATED WATER		TYPICAL SOURCE OF CONTAMINANT
				AVERAGE [1]	RANGE (MIN-MAX)	
PRIMARY DRINKING WATER STANDARDS - Health-Related Standards						
INORGANIC CHEMICALS						
Arsenic (µg/l)	10	0.004	2	1.22	1.2 - 2.7	Erosion of natural deposits
Barium (mg/l)	1	2	0.1	0.098	0.097 - 0.21	Erosion of natural deposits
Fluoride (mg/l)	2	1	0.1	0.40	0.23 - 0.40	Erosion of natural deposits
Nitrate as N (mg/l)	10	10	0.4	7.9	5.0 - 8.4	Leaching from fertilizer use
RADIOACTIVITY						
Gross Alpha (pCi/l)	15	(0)	3	5.2	ND - 5.25	Erosion of natural deposits
Uranium (pCi/l)	20	0.43	1	2.2	1.2 - 5.7	Erosion of natural deposits
SECONDARY DRINKING WATER STANDARDS - Aesthetic Standards, Not Health-Related						
Chloride (mg/l)	500	NA	NA	29	23 - 55	Runoff/leaching from natural deposits
Odor (threshold odor number)	3	NA	1	0.02	ND - 1	Naturally occurring organic materials
Specific Conductance (µmho/cm)	1,600	NA	NA	521	410 - 710	Substances that form ions in water
Sulfate (mg/l)	500	NA	0.5	57.0	30 - 83	Runoff/leaching from natural deposits
Total Dissolved Solids (mg/l)	1,000	NA	NA	330	260 - 490	Runoff/leaching from natural deposits
OTHER CONSTITUENTS OF INTEREST						
Alkalinity (mg/l)	NA	NA	NA	165.6	140 - 250	Runoff/leaching from natural deposits
Calcium (mg/l)	NA	NA	NA	63.5	50.3 - 103	Runoff/leaching from natural deposits
Hardness as CaCO ₃ (mg/l)	NA	NA	NA	220	168 - 338	Runoff/leaching from natural deposits
Hexavalent Chromium (µg/l)	10	0.02	1	3.4	2.4 - 6.7	Erosion of natural deposits; industrial waste discharge
Magnesium (mg/l)	NA	NA	NA	14.7	10.2 - 20	Runoff/leaching from natural deposits
pH (unit)	NA	NA	NA	7.9	7.6 - 7.99	Hydrogen ion concentration
Potassium (mg/l)	NA	NA	NA	2.7	2.4 - 5	Runoff/leaching from natural deposits
Sodium (mg/l)	NA	NA	NA	25	12 - 22	Runoff/leaching from natural deposits
UNREGULATED CONSTITUENTS REQUIRING MONITORING						
CONSTITUENTS AND (UNITS)	NL	PHG OR (MCLG)	AVERAGE	RANGE (MIN-MAX)	TYPICAL SOURCE OF CONTAMINANT	
Chlorate (µg/l) [4]	800	NA	4.6	ND - 300	By-product of drinking water chlorination; industrial processes	
Chlorodifluoromethane (µg/l) [4]	NA	NA	0.001	ND - 0.14	Refrigerant	
Molybdenum (µg/l) [4]	NA	NA	0.05	ND - 2.9	Runoff/leaching from natural deposits	
Strontium (µg/l) [4]	NA	NA	12.1	ND - 660	Runoff/leaching from natural deposits	
Vanadium (µg/l)	50	NA	4.5	ND - 4.5	Runoff/leaching from natural deposits	
DISTRIBUTION SYSTEM WATER QUALITY - COLIFORM BACTERIA						
CONSTITUENTS AND (UNITS)	MCL	MCLG OR (MRDLG)	NUMBER OF DETECTIONS	NO. OF VIOLATIONS	TYPICAL SOURCE OF CONTAMINANT	
Total Coliform Bacteria (state Total Coliform Rule)	>1 positive monthly sample	0	0	NONE	Naturally present in the environment	
DISTRIBUTION SYSTEM WATER QUALITY - OTHER PARAMETERS						
CONSTITUENTS AND (UNITS)	MCL OR (MRDL) OR <SMCL>	MCLG OR (MRDLG)	AVERAGE	RANGE (MIN-MAX)	TYPICAL SOURCE OF CONTAMINANT	
Chlorine Residual (mg/l)	(4)	(4)	1.20	0.77 - 1.59	Drinking water disinfectant added for treatment	
Haloacetic Acids (µg/l)	60	NA	1.35	ND - 2.7	By-product of drinking water chlorination	
Heterotrophic Plate Count (HPC)	TT	NA	0.76	ND - 2	Naturally present in the environment	
Odor (threshold odor number)	<3>	NA	1	ND - 1	Naturally occurring organic materials	
Total Trihalomethanes (µg/l)	80	NA	15.1	7.2 - 23	By-product of drinking water chlorination	
Turbidity (NTU)	<5>	NA	0.002	ND - 0.1	Runoff/leaching from natural deposits	
DISTRIBUTION SYSTEM - LEAD AND COPPER AT RESIDENTIAL TAPS						
CONSTITUENTS AND (UNITS)	ACTION LEVEL	PHG	90TH PERCENTILE VALUE	SITES EXCEEDING AL/NUMBER OF SITES	TYPICAL SOURCE OF CONTAMINANT	
Lead (µg/l)	15	0.2	0.23	1/27	Corrosion of household plumbing	
Copper (mg/l)	1.3	0.3	0.14	0/27	Corrosion of household plumbing	

A total of 27 residences were tested for lead and copper in August 2020. Lead was detected in 1 sample, but did not exceed the AL. Copper was detected in 18 samples, none of which exceeded the AL. The ALs for lead and copper are the concentrations which, if exceeded in more than ten percent of the samples tested, trigger treatment or other requirements that a water system must follow. In 2017, lead was detected over the AL in less than ten percent of the samples; therefore, La Puente Valley County Water District complied with the lead action level. The next required sampling for lead and copper will be performed in the summer of 2023.

SCHOOL LEAD SAMPLING

Number of Schools Requesting Lead Sampling: **3**

NOTES

AL = Action Level
DLR = Detection Limit for Purposes of Reporting
MCL = Maximum Contaminant Level
MCLG = Maximum Contaminant Level Goal
mg/l = parts per million or milligrams per liter
µg/l = parts per trillion or nanograms per liter

MRDL = Maximum Residual Disinfectant Level
MRDLG = Maximum Residual Disinfectant Level Goal
NA = No Applicable Limit
ND = Not Detected at DLR
NL = Notification Level
NTU = Nephelometric Turbidity Units

pCi/l = picoCuries per liter
PHG = Public Health Goal
SMCL = Secondary Maximum Contaminant Level for aesthetic characteristics (taste, odor, color)
TT = Treatment Technique
µg/l = parts per billion or micrograms per liter
µmho/cm = micromhos per centimeter

[1] The results reported in the table are average concentrations of the constituents detected in your drinking water during year 2020 or from the most recent tests. Treated water data from La Puente Valley County Water District and Industry Public Utilities. [2] Constituent was detected but the average result is less than the DLR. [3] Constituent does not have a DLR. Constituent was detected but the average result is less than the analytical Method Reporting Limit. [4] Monitoring data from Industry Public Utilities.

NOW AVAILABLE:

LA PUENTE VALLEY COUNTY WATER DISTRICT

2020 CONSUMER CONFIDENCE REPORT

La Puente Valley County Water District's 2020 Consumer Confidence Report is now available. This annual report is required under the State Drinking Water Act and provides information on where our water comes from and the quality of our water.

The water that we provide you – our valued customer – continues to meet or exceed all state and federal water quality standards for health and safety.

To learn more and view the report, visit

www.lapuentewater.com/ccr.pdf

Hard copies of the report are also available at our District office, 112 N. 1st St., La Puente. We are committed to communicating important, up-to-date information with our customers.

2020

CONSUMER CONFIDENCE REPORT

COMMITTED TO WATER QUALITY: ABOUT THE CCR

Industry Public Utilities is committed to keeping our customers informed about the quality of the safe, reliable drinking water we provide to your homes 24/7 and meets or exceeds all state and federal standards.

Our 2020 Consumer Confidence Report (CCR) is an annual drinking water quality report that the Safe Drinking Water Act requires public water systems to provide to its customers and includes important information on where our water comes from and the quality of your water.

For information or questions regarding this report, please contact **Roy Frausto, (626) 336-1307**.

Este informe contiene información muy importante sobre su agua de beber. Tradúzcalo ó hable con alguien que lo entienda bien. Para más información o preguntas con respecto a este informe, póngase en contacto con el **Sr. Roy Frausto, (626) 336-1307**.

此報告包含有關您的飲用水的重要信息。可以翻譯此報告或與了解它的人交談。

Newell W. Ruggles, *Commissioner*

Michael Greubel, *Commissioner*

**MEETINGS HELD 2ND THURSDAYS OF EACH MONTH AT 8:30 A.M.
LOCATION: 15651 EAST STAFFORD ST., INDUSTRY**

OUR WATER SOURCES

INDUSTRY PUBLIC UTILITIES relies on local groundwater for our water supply. Our top priority is ensuring this groundwater is safely treated to meet some of the highest water quality standards in the world.

Industry Public Utilities' water system is operated and managed by the La Puente Valley County Water District. During 2020, Industry Public Utilities' water supply came from San Gabriel Valley Water Company (SGVWC), La Puente Valley County Water District (LPVCWD) wells and the City of Industry Well No. 5 (all located within the Main San Gabriel Groundwater Basin).

The majority of the water delivered to customers through the water system undergoes a significant treatment process. The treatment systems are designed to treat specific types of contaminants. This process is monitored closely and the water is sampled regularly.

HOW WE TREAT YOUR WATER

1. Granular Activated Carbon Filled (GAC) Vessels remove VOCs to below detection levels.
2. A single pass ion exchange system uses resin specifically manufactured to remove perchlorate.
3. A hydrogen peroxide injection system injects hydrogen peroxide in preparation for the UV reactors.
4. UV reactors treat for NDMA and 1, 4-Dioxane.
5. Water exiting the facility is chlorinated to provide a disinfectant residual in the water system.
6. Treated water then enters the water system and is delivered to your home.

DRINKING WATER SOURCE ASSESSMENT

In accordance with the Federal Safe Drinking Water Act, an assessment of the drinking water sources for SGVWC was completed in October 2008. The goal of this assessment was to identify types of activities in the proximity of our drinking water sources that could pose a threat to the water quality. The assessment concluded SGVWC's water sources are most vulnerable to contaminants from the following activities or facilities, including leaking underground storage tanks (known as contaminant plumes); hardware/lumber/parts stores; hospitals; gasoline stations; above ground storage tanks; spreading basins; storm drain discharge points; and transportation corridors, such as freeways and state highways.

An assessment of the drinking water sources for LPVCWD was updated in March 2008. The assessment concluded LPVCWD's water sources are most vulnerable to contaminants from the following activities or facilities, including leaking underground storage tanks (known as contaminant plumes), high-density housing and transportation corridors, such as freeways and state highways. LPVCWD and SGVWC perform thousands of water quality tests per year to ensure our water meets or exceeds state and federal standards.

REQUEST A SUMMARY OF THE LPVCWD OR SGVW ASSESSMENT BY CONTACTING ROY FRAUSTO AT 626-336-1307.

PRECAUTIONS FOR IMMUNO-COMPROMISED PEOPLE

Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised people, such as those with cancer taking chemotherapy, people who have undergone organ transplants, those with HIV/AIDS or other immune system disorders, the elderly and infants, can be particularly at risk from infections. Immuno-compromised people should seek advice about drinking water from their health care providers.

US-EPA/Centers for Disease Control (CDC) guidelines on appropriate means to lessen the risk of infection by Cryptosporidium and other microbial contaminants are available from the Safe Drinking Water Hotline: 1-800-426-4791.

ABOUT YOUR DRINKING WATER: SAMPLING RESULTS

Your drinking water is tested thousands of times per year to ensure it meets or exceeds all state and federal drinking water standards. Our water is tested by certified professionals and laboratories to ensure the highest levels of safety.

Important information about the tables in this report:

- Tables show the average and range of concentrations of the constituents tested during the 2020 calendar year.
- The state allows us to monitor for some contaminants less than once per year because the concentrations of these contaminants do not change frequently.
- Unless otherwise noted, the data in this table are from the testing performed from Jan. 1 to Dec. 31, 2020.
- The table lists all the contaminants detected in your drinking water that have federal and state drinking water standards.
- Detected unregulated contaminants of interest are also included.

INFORMATION ABOUT DRINKING WATER CONTAMINANTS

Drinking water sources (both tap water and bottled water) include rivers, lakes, streams, ponds, reservoirs, springs and wells. As the water travels over the surface of the land or through the ground, the water dissolves naturally occurring minerals – sometimes including radioactive material – and can also pick up substances resulting from the presence of animals and human activity.

Drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the [USEPA's Safe Drinking Water Hotline, 1-800-426-4791](tel:1-800-426-4791).

Natural contaminants present in source water prior to treatment may include:

Microbial contaminants: Such as viruses and bacteria, that may come from sewage treatment plants, septic systems, agricultural livestock operations and wildlife.

Inorganic contaminants: Such as salts and metals, that can be naturally occurring or result from urban stormwater runoff, industrial or domestic wastewater discharges, oil and gas production, mining, or farming.

Pesticides and herbicides: That may come from a variety of sources such as agriculture, urban stormwater runoff and residential uses.

Organic chemical contaminants: Including synthetic and volatile organic chemicals, which are by-products of industrial processes and petroleum production, and can also come from gasoline stations, urban stormwater runoff, agricultural application, and septic systems.

Radioactive contaminants: Can be naturally occurring or be the result of oil and gas production and mining activities.

CONTAMINANTS IN DRINKING WATER

NITRATE ADVISORY

At times, nitrate in your tap water may have exceeded half the MCL, but it was never greater than the MCL. The following advisory is issued because in 2020, the District recorded a nitrate measurement in its treated drinking water above half the nitrate MCL. Nitrate in drinking water at levels above 10 milligrams per liter (mg/L) is a health risk for infants of less than six months of age. Such nitrate levels in drinking water can interfere with the capacity of the infant's blood to carry oxygen, resulting in a serious illness; symptoms include shortness of breath and blueness of the skin. Nitrate levels above 10 mg/L may also affect the ability of the blood to carry oxygen in other individuals, such as pregnant women and those with certain specific enzyme deficiencies. If you are caring for an infant, or you are pregnant, you should ask advice from your health care provider.

LEAD AND DRINKING WATER

Regulations require local water agencies to test for lead at all K-12 schools constructed before 2010. K-12 schools (total of 2) within the boundaries of the IPU water system were sampled and tested for lead in 2018. If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing.

IPU is responsible for providing high-quality drinking water, but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the [Safe Drinking Water Hotline, 1-800-426-4791](tel:1-800-426-4791), or epa.gov/lead.

WATER QUALITY STANDARDS, DEFINITIONS, ACRONYMS AND ABBREVIATIONS

The chart in this report shows the following types of water quality standards:

MAXIMUM CONTAMINANT LEVEL (MCL): The highest level of a contaminant that is allowed in drinking water. Primary MCLs are set as close to the PHGs (or MCLGs) as is economically and technologically feasible. Secondary MCLs are set to protect the odor, taste, and appearance of drinking water.

MAXIMUM RESIDUAL DISINFECTANT LEVEL (MRDL): The highest level of a disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary for control of microbial contaminants.

PRIMARY DRINKING WATER STANDARD (PDWS): MCLs, MRDLs and treatment techniques (TTs) for contaminants that affect health, along with their monitoring and reporting requirements.

REGULATORY ACTION LEVEL (AL): The concentration of a contaminant, which, if exceeded, triggers treatment or other requirements that a water system must follow.

NOTIFICATION LEVEL (NL): NLs are health-based advisory levels established by the State Board for chemicals in drinking water that lack MCLs. When chemicals are found at concentrations greater than their NL, certain requirements and recommendations apply.

The chart in this report includes three types of water quality goals:

MAXIMUM CONTAMINANT LEVEL GOAL (MCLG): The level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs are set by the USEPA.

MAXIMUM RESIDUAL DISINFECTANT LEVEL GOAL (MRDLG): The level of a drinking water disinfectant below which there is no known or expected risk to health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.

PUBLIC HEALTH GOAL (PHG): The level of a contaminant in drinking water below which there is no known or expected risk to health. PHGs are set by the California Environmental Protection Agency.

TREATMENT TECHNIQUE (TT): A required process intended to reduce the level of a contaminant in drinking water.

INDUSTRY PUBLIC UTILITIES · YEAR 2020 WATER QUALITY TABLE

CONSTITUENTS AND (UNITS)	MCL	PHG or (MCLG)	DLR	TREATED WATER		TYPICAL SOURCE OF CONTAMINANT
				AVERAGE [1]	RANGE (MIN-MAX)	
PRIMARY DRINKING WATER STANDARDS - Health-Related Standards						
INORGANIC CHEMICALS						
Arsenic (µg/l)	10	0.004	2	2.29	ND - 2.90	Erosion of natural deposits
Barium (mg/l)	1	2	0.1	0.14	ND - 0.21	Erosion of natural deposits
Fluoride (mg/l)	2	1	0.1	0.31	0.22 - 0.43	Erosion of natural deposits
Nitrate as N (mg/l)	10	10	0.4	6.69	3.20 - 8.70	Leaching from fertilizer use
RADIOACTIVITY						
Gross Alpha (pCi/l)	15	(0)	3	3.1	ND - 11.80	Erosion of natural deposits
Uranium (pCi/l)	20	0.43	1	3.5	1.2 - 5.70	Erosion of natural deposits

SECONDARY DRINKING WATER STANDARDS - Aesthetic Standards, Not Health-Related						
Chloride (mg/l)	500	NA	NA	32	16 - 54	Runoff/leaching from natural deposits
Odor (threshold odor number)	3	NA	1	1.0	1.0	Runoff/leaching from natural deposits
Specific Conductance (µmho/cm)	1,600	NA	NA	573	390 - 770	Substances that form ions in water
Sulfate (mg/l)	500	NA	0.5	53	23 - 83	Runoff/leaching from natural deposits
Total Dissolved Solids (mg/l)	1,000	NA	NA	345	310 - 560	Runoff/leaching from natural deposits

OTHER CONSTITUENTS OF INTEREST						
Alkalinity (mg/l)	NA	NA	NA	195	140 - 250	Runoff/leaching from natural deposits
Calcium (mg/l)	NA	NA	NA	74.5	50.3 - 103	Runoff/leaching from natural deposits
Hardness as CaCO ₃ (mg/l)	NA	NA	NA	245	168 - 338	Runoff/leaching from natural deposits
Hexavalent Chromium (µg/l)	NA	0.02	NA	4.25	2.4 - 6.7	Runoff/leaching from natural deposits
Magnesium (mg/l)	NA	NA	NA	14.7	10.2 - 20	Runoff/leaching from natural deposits
pH (unit)	NA	NA	NA	7.8	7.6 - 7.99	Hydrogen ion concentration
Potassium (mg/l)	NA	NA	NA	3.68	2.7 - 5	Runoff/leaching from natural deposits
Sodium (mg/l)	NA	NA	NA	16.8	12 - 22	Runoff/leaching from natural deposits

UNREGULATED CONSTITUENTS REQUIRING MONITORING [4]						
CONSTITUENTS AND (UNITS)	NL	PHG OR (MCLG)	AVERAGE	RANGE (MIN-MAX)	TYPICAL SOURCE OF CONTAMINANT	
Chlorate (µg/l)	800	NA	225.4	ND - 330	By-product of drinking water chlorination; industrial processes	
Chlorodifluoromethane (µg/l)	NA	NA	0.07	ND - 0.14	Refrigerant	
Molybdenum (µg/l)	NA	NA	2.6	ND - 2.9	Runoff/leaching from natural deposits	
Strontium (µg/l)	NA	NA	593	ND - 660	Runoff/leaching from natural deposits	
Vanadium (µg/l)	50	NA	2.34	ND - 4.5	Runoff/leaching from natural deposits	

DISTRIBUTION SYSTEM WATER QUALITY						
CONSTITUENTS AND (UNITS)	MCL OR (MRDL)	MCLG OR (MRDLG)	AVERAGE	RANGE (MIN-MAX)	TYPICAL SOURCE OF CONTAMINANT	
Total Coliforms	no more than 1 positive monthly sample	0	0	0	Naturally present in the environment	
Total Trihalomethanes (µg/l)	80	NA	3.85	3.6 - 4.1	By-product of drinking water disinfection	
Haloacetic Acids (µg/l)	60	NA	ND	ND	By-product of drinking water disinfection	
Chlorine Residual (mg/l)	(4)	(4)	1.25	0.87 - 1.57	Drinking water disinfectant added for treatment	
Heterotrophic Plate Count (HPC)	TT	NA	0.74	ND-8	Naturally present in the environment	
Odor (threshold odor number) [5]	3	NA	1	1	Naturally occurring organic materials	
Turbidity (NTU) [5]	5	NA	<0.1 [3]	ND - 0.1	Runoff/leaching from natural deposits	

LEAD AND COPPER AT RESIDENTIAL TAPS						
CONSTITUENTS AND (UNITS)	ACTION LEVEL	PHG	90TH PERCENTILE VALUE	SITES EXCEEDING AL/NUMBER OF SITES	TYPICAL SOURCE OF CONTAMINANT	
Lead (µg/l)	15	0.2	1.4	0/23	Corrosion of household plumbing	
Copper (mg/l)	1.3	0.3	0.53	0/23	Corrosion of household plumbing	

A total of 23 residences were tested for lead and copper in August 2019. Lead was not detected above the reporting limit in any of the samples. Copper was detected above the reporting limit in 16 samples, none of which exceeded the AL. The Industry Public Utilities complies with the Lead and Copper Rule. The next required sampling for lead and copper will be conducted in the summer of 2022.

SCHOOL LEAD SAMPLING

Number of Schools Requesting Lead Sampling: 2

NOTES

- AL** = Action Level
- DLR** = Detection Limit for Purposes of Reporting
- MCL** = Maximum Contaminant Level
- MCLG** = Maximum Contaminant Level Goal
- mg/l** = parts per million or milligrams per liter
- MRDL** = Maximum Residual Disinfectant Level
- MRDLG** = Maximum Residual Disinfectant Level Goal
- NA** = No Applicable Limit
- ND** = Not Detected at DLR
- ng/l** = parts per trillion or nanograms per liter
- NL** = Notification Level
- NTU** = Nephelometric Turbidity Units
- pCi/l** = picoCuries per liter
- PHG** = Public Health Goal
- µg/l** = parts per billion or micrograms per liter
- µmho/cm** = micromhos per centimeter

[1] The results reported in the table are average concentrations of the constituents detected in your drinking water during year 2020 or from the most recent tests.

Treated water data are provided by San Gabriel Valley Water Company and La Puente Valley County Water District

[2] Constituent does not have a DLR. Constituent was detected but the average result is less than the analytical Method Reporting Limit.

[3] "<" means constituent was detected but the average result is less than the indicated reporting limit or DLR.

[4] Monitoring data provided by San Gabriel Valley Water Company. [5] This water quality is regulated by a secondary standard to maintain aesthetic characteristics (taste, odor, color).

INDUSTRY PUBLIC UTILITIES

2020 CONSUMER CONFIDENCE REPORT

Industry Public Utilities' 2020 Consumer Confidence Report is now available. This annual report is required under the State Drinking Water Act and provides information on where our water comes from and the quality of our water.

The water that we provide you – our valued customer – continues to meet or exceed all state and federal water quality standards for health and safety.

To learn more and view the report, visit

www.industrypublicutilities.com/ccr.pdf

Hard copies of the report are also available at our District office, 112 N. 1st St., La Puente. We are committed to communicating important, up-to-date information with our customers.

RESOLUTION NO. 271

**RESOLUTION OF NECESSITY ADOPTED BY THE BOARD OF DIRECTORS
OF LA PUENTE VALLEY COUNTY WATER DISTRICT
RELATING TO ACQUISITION OF EASEMENT**

WHEREAS, the La Puente Valley County Water District (the "District") is a county water district, duly formed under Division 12 of the California Water Code, and is granted by Water Code Section 31040 the right of eminent domain to acquire any property necessary to carry out the business of the District.

WHEREAS, the District requires a certain easement, legally described as follows, over certain real property located within its jurisdiction, and designated by Los Angeles County Assessor's Parcel Number 8208-020-046 (which easement is referred to herein as the "Easement"), in order to be able to power a pump station to provide recycled water to properties in the District's jurisdiction:

TWO STRIPS OF LAND LYING WITHIN PARCEL 3 OF PARCEL MAP NO. 319, AS PER MAP FILED IN BOOK 314, PAGE 79 OF PARCEL MAPS, IN THE OFFICE OF THE COUNTY RECORDER OF SAID COUNTY, THE CENTERLINES OF SAID STRIPS ARE DESCRIBED AS FOLLOWS:

STRIP #1 (6.00 FEET WIDE)

COMMENCING AT THE WESTERLY TERMINUS OF THAT CERTAIN COURSE IN THE NORTHEASTERLY LINE OF SAID PARCEL 3, SHOWN AS "NORTH 71°10'27" WEST 165.43 FEET" ON SAID PARCEL MAP; THENCE ALONG SAID CERTAIN COURSE, SOUTH 71°10'27" EAST 68.76 FEET TO THE TRUE POINT OF BEGINNING; THENCE LEAVING SAID CERTAIN COURSE, SOUTH 18°49'33" WEST 14.00 FEET TO A POINT OF ENDING, SAID POINT HEREINAFTER REFERRED TO AS POINT "A".

STRIP #2 (14.00 FEET WIDE)

COMMENCING AT SAID POINT "A"; THENCE NORTH 71°10'27" WEST 1.64 FEET TO THE TRUE POINT OF BEGINNING; THENCE SOUTH 18°49'33" WEST 17.00 FEET TO A POINT OF ENDING.

THE AREA OF THE ABOVE-DESCRIBED STRIPS OF LAND CONTAIN AN AREA OF APPROXIMATELY 322 SQUARE FEET. A SKETCH TO THE ABOVE LEGAL DESCRIPTION IS SET FORTH IN EXHIBIT "A" ATTACHED HERETO AND MADE A PART HEREOF. (525 Parriott Place, City of Industry, California 91745; Assessor's Parcel Number 8208-020-046); and

WHEREAS, the District's Board of Directors finds and determines that notice of intention to adopt this resolution of necessity was duly given and at the time and place fixed for hearing, the Board heard and considered all of the evidence presented;

NOW, THEREFORE, BE IT RESOLVED, by at least a two-thirds vote of the Board of Directors of the La Puente Valley County Water District under Code of Civil Procedure Sections 1240.030 and 1245.230, that said Board of Directors finds and determines each of the following:

1. The public interest and necessity require the proposed acquisition of the Easement to ensure the District is able to provide recycled water to properties in its jurisdiction to reduce the use of local groundwater.
2. The Easement is located in the manner that will be most compatible with the greatest public good and the least private injury.
3. The Easement is necessary for the District to begin to supply recycled water to properties in its jurisdiction to reduce the District's need for local groundwater, which is experiencing declining water levels in the Main San Gabriel Basin.
4. The offer required by Government Code Section 7267.2 has been made to the record owners of the Property.

BE IT FURTHER RESOLVED, that the District's legal counsel is authorized and directed to commence and maintain a proceeding in the Los Angeles Superior Court on the District's behalf to acquire the Easement, as described above, in the property situated at 525 Parriott Place, City of Industry, California 91745; Los Angeles County Assessor's Parcel Number 8208-020-046; and

BE IT FURTHER RESOLVED, that the District's legal counsel is hereby authorized and directed to make application to the Court for an Order for Possession Before Judgment in these proceedings; and

BE IT FURTHER RESOLVED, that the District's General Manager is hereby authorized and directed to issue a check from the District's general account in the amount of \$12,000.00, payable to the Clerk of the Los Angeles Superior Court, to be delivered to the District's legal counsel, to be deposited with the payee as security for the Order for Possession Before Judgment authorized above.

THE FOREGOING was **PASSED AND ADOPTED** by the vote of the Board of Directors of the La Puente Valley County Water District this 14th day of June, 2021, to wit:

AYES: _____

NOES: _____

ABSENT: _____

William Rojas, President
