

## Industry Public Utilities Water Rates and Charges Effective January 1, 2011

Bi-Monthly water bills are comprised of two components (charges), a Water Charge and a Service Charge.

The Water Charge is calculated by multiplying the water usage rate (commodity rate) by the total number of units of water used through your water meter. For residential customers the water usage rate changes based on the amount of water used. Usage from 0-30 units of water is charged at one rate and any usage over 30 units, within a two month billing period, is charged at a higher rate.

### Water Usage Rates (Commodity Rate)

*One HCF (hundred cubic feet) is equal to 748 gallons of water.*

The Service Charge is a fixed charge, based on the size of your water meter, which is charged regardless of the amount of water used.
